5 AI Tools That Replaced 3 Hours of My Day

A practical guide for developers and founders

Swipe to learn more >>

The Problem

Most developers spend 3+ hours daily on repetitive tasks.

Research. Boilerplate. Meeting notes. Follow-ups.

AI can handle all of this — if you know which tools to use.

Cursor

AI-native code editor.

-> Writes 60% of my boilerplate automatically

-> Understands full codebase context

-> Suggests entire functions as you type

Time saved: ~45 min/day

Perplexity

AI search with cited sources.

-> Research that took 30 min now takes 5

-> Always shows source links

-> Great for technical comparisons

Time saved: ~30 min/day

Claude

Complex reasoning & writing.

-> Debugging logic errors

-> Drafting technical docs

-> Code reviews and refactoring

Time saved: ~60 min/day

The Real Unlock

05

It's not about individual tools.

It's about chaining them:

Perplexity -> Claude -> Notion -> Zapier

When tools work together, hours disappear from your schedule.
